Engaging and Enrolling:
Countering the Chilling Effect of “Public Charge” to Help Eligible Children get Medicaid and CHIP Coverage

Webinar: October 13, 2021
2:00pm EST
Agenda

• Health Coverage Trends for Latino Children
  • Kelly Whitener, Georgetown University McCourt School of Public Policy’s Center for Children and Families

• CMS & DHS Guidance on Public Charge Safeguarding Beneficiary Information
  • Amanda Baran, Department of Homeland Security
  • Sarah Lichtman Spector, Center for Medicaid & CHIP Services, Centers for Medicare & Medicaid Services

• The Chilling Effects of the Public Charge and What to Do About It
  • Patrick Bresette, Children’s Defense Fund – Texas

• New Resources for Enrollment Outreach
  • Jenn Kerr, Connecting Kids to Coverage National Campaign

• Questions and Answers
Health Coverage Trends for Latino Children

Kelly Whitener, JD/MPH
Associate Research Professor
Progress Covering Latino Children Reversed Course 2016-2019

Latino
Non-Latino
Dominican children have one of the lowest uninsured rates for Latino children: **4.8%**

Dominican children are likely to live in **New York** or **New Jersey**, where the Latino child uninsured rate is **lower** than the national average.
Salvadoran children are most likely to live in **California** or **Texas**.

But the uninsured rate for Salvadoran children in Texas is **6.6x** the rate in California.

State Residency

Nearly a quarter of Honduran children are uninsured nationally, the highest of all Latino subgroups studied, increasing significantly from 18.2% in 2016.

This may be driven by very high uninsured rates for Honduran children in Texas (34.3%) and Florida (20.7%), where almost a third of Honduran children live.

The Chilling Effect of Public Charge and What to Do About it

Patrick Bresette, CDF-Texas Executive Director
Ensuring a Healthy Start for Texas Children

• The CDF-Texas’ Healthy Children = Health Communities project helps to ensure a Healthy Start for Texas children, so that every child can have access to affordable, comprehensive health and mental health coverage and the care they need to grow and thrive.

• **We meet children and families where they are and work with partners who families trust.**

• Collaborating with schools, businesses, churches, clinics, child care providers, libraries, WIC clinics and other community partners.

• Providing community-based education and training about affordable coverage options for children and families.

• We have teams of Community Health Workers in the lower Rio Grande Valley and rural East Texas.
CDF-Texas released this report in early 2020 after interviewing 32 organizations from across Texas who provide services to low-income families. We documented what they shared about the impact of Public Charge on the immigrant communities they serve. And we sought their advice on how best to address the challenge.

In July of 2019, Maria Hernandez was on the phone with a colleague from another organization. She typed a few numbers into a spreadsheet, and hit enter on a calculation.

“Oh, wow,” she murmured. “Can that be right?”

“What does it say?” asked the colleague. Hernandez checked the numbers and tried the calculation again. Same answer.

“Eighty percent,” Hernandez said.

“Did you say eighty?” asked the colleague. “Like eight-zero?”

“Yeah, eighty. That is... quite a bit worse than I had expected,” Hernandez said.
Hernandez is the founder and Executive Director of an organization in Austin, TX, called VELA, which provides assistance, support, and training to immigrant families who have children with disabilities.

The number Hernandez had calculated during that phone call in July, 2019, was the “year-over-year” change in families enrolled in SNAP; that is to say, 80 percent fewer VELA families were enrolled in SNAP in the summer of 2019 than had been in the summer of 2018.
Background:

Texas has the highest child uninsured rate in the nation. In 2019 our rate was 12.7 percent – more than twice the national average of 5.7 percent. When these numbers are disaggregated for race and ethnicity, it becomes apparent that there are broad disparities. Hispanic children, for example, have an uninsured rate of 17.5 percent, while Black and White (non-Hispanic) children have 8.5 and 8.3 percent uninsured rates, respectively.
Background:

In January 2017, news emerged about possible changes to an immigration test called the “public charge” that would radically expand the public charge test and change the definition of what constitutes a “public charge.” This threw both immigrant communities and immigration rights advocates into a state of alarm and confusion.
Background:

The final rule did not count a dependent’s use of public benefit programs against a green card applicant, as previous drafts had threatened. That is to say, children who are enrolled in benefits (Medicaid or SNAP, for example) would not negatively affect their parent’s application.

By the time the new public charge regulation went into effect, to many low-income immigrants, it didn’t really matter what the regulation actually said.

Slowly but perceptibly, families started backing away from the programs for which they, and in much greater numbers, their children, were eligible. Advocates called this withdrawal “the chilling effect.”
Background:

In late 2017, the Texas Health and Human Services Commission’s (HHSC) monthly data reports started indicating rapidly dropping enrollment numbers in both CHIP and Medicaid. By mid-2019, the data showed that within a 17-month period (December 2017-April 2019) Texas had lost about six percent of its enrollment in CHIP and Children’s Medicaid – more than 200,000 children. **By February of 2020, the total had grown to 237,000 children, representing a seven percent decline in enrollment since December 2017.**
Findings:

“From El Paso to Tyler, from McAllen up to Dallas and Fort Worth, people who work in the world of public benefits were resoundingly clear: it is the withdrawal among families of mixed immigration status that caused the enormous drop in enrollment across a variety of public benefits, beginning in late 2017.”
Findings:

“As stated at the beginning, VELA in Austin, whose membership is 85 percent immigrant families, saw an **80 percent drop in SNAP-enrolled families**. ECHOS in Houston, whose clientele are 99 percent below poverty line and 82 percent mixed status families, saw **declines of 42 percent in Children’s Medicaid enrollment, 42 percent in adult Medicaid and CHIP-Perinatal enrollment, and a 37 percent drop in SNAP enrollment**, from 2017 through 2019. And Foundation Communities, which does ACA Marketplace enrollment, saw a disproportionately large drop-off in immigrant clients (16.9 percent) versus the decline in non-immigrant clients (5.4 percent) from open enrollment periods for the 2018 and 2019 insurance years. That is to say, **their immigrant client base declined 68 percent more than their non-immigrant clients**.
**Inhibiting Factors:**

1. Limited reassurance from HHSC on Public Charge
2. Conflicting messages between public benefit advocates and immigration attorneys
3. Fear of personal data collection
4. Inadequate training and education on Public Charge
Best Practices:

1. **Staff Training**: comprehensive and repeated staff education

   “Before the training, my staff and I were constantly googling questions, and very uncertain about whether we were giving good information. After the training, we felt a lot more confident knowing that our program wouldn’t affect our students, and knowing that there are agencies and organizations we can refer our students to if they need more help.”
inhibiting factors and best practices

Best Practices:

2. Providing resources and hand-outs to families

The Protecting Immigrant Families (PIF) campaign churned out resources that were informed by both policy experts and community service providers. One-page resources, flyers, and posters all helped communicate the core message of safety to families sitting in waiting rooms or in the enrollment process.
Know Your Rights

NOTE: As of March 9, 2021, the Trump-era Department of Homeland Security public charge regulations no longer exist or apply. All materials on this page have been updated to reflect current public charge policy guidance that went into effect in March 2021. This guidance makes it clear that the use of most public benefits programs, such as health, nutrition, and housing programs, will not have an impact on an individual’s immigration status. That includes, especially, testing, vaccination, and care for COVID-19.

The Protecting Immigrant Families (PIF) coalition is dedicated to providing community-facing materials on public charge to better equip immigrants with what they need to make the best decision for themselves and for their families.

Best Practices:

3. Partnerships, Collaboration, Outreach

A third best practice that organizations relied upon to continue reaching eligible families is the development of community partnerships and collaborations. These partnerships enable the public service sector to reach more deeply into their community, ease the difficulty families have in accessing particular locations, or reduce the number of “errands” a family has to run in order to feed, clothe, and care for their children. As immigrant families have increasingly withdrawn from public life, and feel fear about entering certain locations, these partnerships have been successful at continuing outreach and enrollment efforts that otherwise would have languished.
Best Practices:

4. Relentless Empathy

Empathy and persistence are intangible qualities, but without question these are best practices. Any enrollment system is rife with opportunities to slip through the cracks, fail to understand, miss deadlines, or receive incorrect determinations. When the system has been altered to make access even more difficult the problem grows even worse. An empathetic enrollment assister must also be relentless, because that very bureaucracy demands it of them. In the course of this research, there was no way to quantify the qualities and characteristics of an enrollment worker who goes the metaphorical extra mile to assist their clients, and yet it emerged repeatedly as a definitive best practice for helping families confront their fear and misinformation, get enrolled and stay enrolled.
“Our success is rooted in personal contact, personal relationships. We see this person has a need, and we’re going to help because we care. And I think when you are honest, people can just read that in you, and they’ll trust you and refer people to you. I wish everybody could see that. We are dealing with people’s lives. It’s not numbers, or enrollments. It’s people’s lives. And they say, ‘I would’ve never done it. I don’t know how to read or how to write, I just never would’ve done this.’”

— Graciela Camarena, Children’s Defense Fund TX188
What Comes Next?

The Biden administration’s reversal of recent changes to public charge was a critical first step. More needs to be done, however, to combat mistrust of health care and insurance enrollment... Given [the] continued confusion and mistrust, we need a robust public information campaign deployed by trusted messengers to clarify to vulnerable households what public charge really is and who is subject to the rules. Dispelling disinformation will help immigrant families regain trust in the health system and once again seek out care. This is essential not only for immigrant families but for the health of the United States. We will not fully emerge from COVID-19 without ensuring all communities, particularly those that have been hardest hit by the pandemic, are willing and able to access necessary health services and care.

Current Priorities

School-Based Outreach
Remind families and teachers that access to health care prepares kids for school and extracurricular activities; encourage them to take advantage of year-round enrollment.
Current Priorities

Flu Vaccines & Missed Care
Encourage families to enroll in Medicaid and CHIP so they can access flu vaccines and continue to encourage families to use enrollment benefits to catch up on missed vaccinations and well-child visits.
